TANMAY DINKAR RAUT

Phoenix, AZ | tanmay.rautwork@gmail.com | +1 480-810-7747 | linkedin.com/in/rauttanmay

PROFESSIONAL SUMMARY

ERP Systems professional with 5+ years of progressive experience driving ERP implementation, manufacturing systems optimization, and digital transformation in discrete manufacturing environments. Specializes in architecting end-to-end ERP solutions across manufacturing, finance, supply chain, sales, and quality functions using Odoo ERP. Leverages AI-powered tools to accelerate solution development, reduce external development costs, and increase organizational agility. Leads cross-functional initiatives impacting 8+ departments and 500+ SKUs. Holds a Master of Science in Mechanical Engineering from Arizona State University.

TECHNICAL SKILLS

ERP & Enterprise Systems: Odoo 17 (Manufacturing, Inventory, Procurement, Sales, Accounting, Quality, CRM, Studio), SAP S/4HANA (process alignment), SQL (PostgreSQL), Excel (VBA, Power Query, PivotTables)

Automation & Analytics: ERP configuration and automation (Python, XML, Odoo Studio), AI-assisted solution development (Claude AI, MCP protocol), SQL dashboard development, KPI reporting, Tableau, JMP

Systems Integration: Odoo-native integration management (Shopify, ShipStation, Stripe, Slack, Avalara), third-party connector administration, ERP data flow troubleshooting

Manufacturing & CI: Lean Manufacturing, Value Stream Mapping, Kaizen, 5S, Kanban, SPC, DOE, FMEA, Root Cause Analysis, BOM/Routing Architecture, Production Planning, GD&T

Tools: JIRA, Wrike, Microsoft Project, SolidWorks, AutoCAD, Creo, CATIA

PROFESSIONAL EXPERIENCE

ERP Systems Engineer II | Apr 2024 – Present

Heckler Design Inc (DBA of Hecktech Inc), Phoenix, AZ

- Lead enterprise-wide ERP strategy and governance for Odoo ERP 17 across 8+ departments (Manufacturing, Procurement, Sales, Finance, Quality, Inventory, CRM, Shipping), managing system architecture for 500+ active SKUs.
- Integrated manufacturing cost accounting with Odoo Accounting — connecting work order labor, material consumption, and overhead to create full cost traceability from production floor to financial statements. Established scrap tracking, three-way matching (PO/receipt/invoice), and Stripe payment gateway for customer invoicing.
- Designed and deployed custom SQL analytics dashboards providing leadership real-time visibility into cycle time, rework rate, yield, backlog, and throughput, enabling proactive operational decisions.
- Set up the complete ERP backend to support the Framework product configurator — created variant-based product structures, component BOMs, and manufacturing routes in Odoo so that when configured orders arrive from Shopify via the eCommerce connector, the system correctly identifies the variant, triggers the right manufacturing order, allocates the correct materials, and calculates accurate costs.
- Designed the Odoo implementation for the in-house cut parts program (C-SKU system): structured 35+ component SKUs with multi-level BOMs, machine routings (xEdge, C64, Kongsberg), yield tracking, reorder rules, and per-part cost analysis for corrugated packaging and felt cutting. Designed 3D engineering views for custom packaging specifications.
- Leveraged AI tools (Claude AI) to accelerate ERP solution design and reduce dependence on external developers. Deployed AI-to-ERP connector (MCP protocol) for real-time operational querying. Created custom AI-powered automation skills including a cross-system barcode/SKU validation tool auditing data across Shopify, Odoo, and printed labels.
- Manage Odoo-native integrations (Shopify, ShipStation, Stripe, Slack, Avalara). Designed RMA workflow for website/distributor/dealer returns with automated inventory adjustments and credit notes. Led ERP-integrated label printing via auto-cut machine, eliminating pre-printed label waste.
- Developed ERP governance documentation, training programs, and change management protocols. Configured automated MO generation and reorder rules for 3D-printed components. Implemented barcode system with data cleansing. Configured UV-printed modesty panel manufacturing workflows.

ERP Systems Engineer | Oct 2023 – Mar 2024

Heckler Design Inc (DBA of Hecktech Inc), Phoenix, AZ

- Led the full Odoo ERP upgrade from version 16 to 17 — coordinating with offshore development team, performing end-to-end testing across all modules, conducting user acceptance testing, holding department meetings to communicate process changes, delivering hands-on training, and resolving post-upgrade issues with minimal operational disruption.

- Launched MRP module with automated reordering, demand forecasting, and procurement automation, significantly reducing raw material stockouts. Configured Python/XML automations in Odoo Studio for work order generation and lead time tracking.
- Implemented Odoo Accounting as the company's financial system, configuring AP, inventory valuation, and manufacturing cost accounting. Replaced spreadsheet-based operational tracking with embedded ERP dashboards and automated reporting.

Manufacturing Engineer | Jul 2023 – Oct 2023
United Foods, Phoenix, AZ

- Led continuous improvement projects targeting labor efficiency and line balancing, improving hourly output and reducing waste. Conducted time studies, implemented standardized work instructions, and optimized preventive maintenance scheduling to reduce equipment downtime.

Production Supervisor – Industrial Fabrication | Jan 2020 – Dec 2022
Vats and Vessels Ltd, Mumbai, India

- Managed pressure vessel fabrication (welding, machining, inspection) for 30+ personnel under ASME Section VIII and ISO 9001. Applied Lean tools (5S, Kaizen), improving first-pass yield and efficiency. Developed BOMs, routing sheets, and operator logs. Zero reportable safety incidents across 12+ months.

EDUCATION

Master of Science in Mechanical Engineering
Arizona State University, Tempe, AZ | GPA: 3.8/4.0
Relevant Coursework: Statistical Process Control, Advanced Quality Control, Operations Management

Bachelor of Technology in Aeronautical Engineering (Minor: Mechanical Engineering)
Manipal Institute of Technology, Manipal, India | GPA: 3.5/4.0
Relevant Coursework: Supply Chain Management, Engineering Management

KEY PROJECT HIGHLIGHTS

AI-Integrated ERP Workflow Development | Heckler Design Inc

- Pioneered integration of AI tools into ERP administration, enabling accelerated solution design and reduced reliance on external developers. Deployed AI-to-ERP connector (MCP protocol) for real-time manufacturing analytics and BOM cost analysis. Built custom AI-powered automation skills for cross-system data validation. Currently leading Odoo 19 upgrade test environment deployment.

In-House Packaging & Framework Configurator – ERP Implementation | Heckler Design Inc

- Designed the complete Odoo implementation for transitioning packaging production in-house (C-SKU program): 35+ components with multi-level BOMs, machine routings (xEdge, C64, Kongsberg), yield tracking, reorder rules, cost analysis, and 3D packaging engineering views. Separately configured variant-based product structures and manufacturing routes for the Framework product configurator, enabling configurable ordering via the company website.

Manufacturing Cost & Financial Integration | Heckler Design Inc

- Integrated work order cost components (labor, machine time, raw materials) directly with Odoo Accounting and Purchasing. Enabled per-unit cost visibility and improved budgeting accuracy. Implemented three-way matching, Stripe payment gateway, and structured RMA workflows across all sales channels.

Material Replenishment & Inventory Optimization | Heckler Design Inc

- Automated min/max reordering and demand-triggered purchase rules in Odoo, eliminating spreadsheet-based procurement. Aligned raw material procurement with machine-level production cycles, significantly reducing stockouts and material holding costs.
